Sterile own tracheostomy tube ship in just four weeks. All custom tracheostomy tubes are shipped to the United States overnight delivery, unless otherwise required. Delivery times may vary. Note to physicians: Federal (U.S.) law restricts tracheostomia tube equipment for sale or at the behest of a physician. By submitting your own form for ordering tracheostomy tube, you declare that the device is required to order a doctor. Since these products are intended for a particular patient, after sending the order of the actual tracheostomy tube can not be canceled or returned. Note to patients: All listed devices are prescription products and must be obtained from a licensed provider or physician. Patients cannot buy directly from Medtronic. Products / Tracheostomy / Similar videos February 10, 2014 08:00 EAST STANDARD TIME ST. PAUL, Minn.--(BUSINESS WIRE)-- Smiths Medical, the world's leading medical device manufacturer, today announced that its Portex Bivona FlexTend™ TTS™ tracheostomy tubes will now be included in the company's standard product offering. Bivona FlexTend™ TTS™ neonatal and baby tubes have proximal shaft extensions helping to keep the connection away from the neck, chin and stoma, aiming to increase that could prevent pressure ulcers. Tá Tá FlexTend™ TTS™ tracheostomy tubes were originally only available as customized products, manufactured in response to doctors' orders. Bivona FlexTend™ TTS™ tracheostomy, made of soft, natural, biocompatible silicone, are designed to be gentle to sensitive tissues of neonatal and pediatric patients who require intermittent or temporary use of the cuff. The inflatable cuff integrated into the outer wall of the tube shaft can be filled with sterile water, which secures the tube in the patient's trachea and creates a seal between the tube and the trachea to direct incoming and outgoing breaths through the inner lumen. Directing all airflow through the lumen helps to optimize breathing for ventilated patients and for patients who perform respiratory therapy. When the seal is no longer needed, the cuff can be deflated and will consist of a close-to-shaft (TTS), which reduces the risk of trachea injury and allows air to flow around the tube supporting the ability to speak. We are pleased to add this special device to our standard portfolio of Bivona® tracheostomy products, said Tommy Johns, Vice President of Global Product Management. Ensuring greater availability of bivona FlexTend™ TTS™ tracheostomy tubes ensures that patients and care providers can have exactly what they need when they need it. The new Bivona FlexTend™ TTS™ tracheostomy tubes as a standard product are manufactured in volume and stored to quickly fill orders and allow customers to keep supplies at hand for possible needs. Smiths Medical will continue to provide Bivona FlexTend™ TTS™ tracheostomy tubes through its customization service. Customized tubes assembled to monitor the unique contours and dimensions of the patient's neck and trachea are essential for patients who have unique needs or atypical tracheal anatomy. Bivona FlexTend™ TTS™ tracheostomy tubes are now available in the United States and will be available in other markets later this year. About Smiths Medical Smiths Medical www.smiths-medical.com is a leading supplier of specialized medical devices and equipment to global markets with a focus on drug delivery, vital care and safety equipment market segments.
